1. Rear seat height: 13" available w/ 24" (25-240) wheels only.
2. See number 5 distance rear to front caster on diagram.
3. Notations to omit wings should be documented in "Special Instructions" box.
4. If no color chosen black will be shipped.
5. Click straps positioned to secure hips and feet.
6. Kenda tires available in 24", 25" and 26" sizes.
7. Sideguard material made of aluminum, tube in same material as frame.

NOTE: All specifications and dimensions are approximate.

Invacare® Top End® X-Terminator™ BB / Titanium Wheelchairs

Measuring Guidelines

Seat width - Measure frame outside to outside in 1" increments. 1/2" increments are available.

Tapered seat - Measure outside frame width desired at back post to 10" deep and then front at edge of seat upholstery. Maximum difference is 4".

Seat depth - Measured by the length of upholstery from the front of the seat sling to the back post. Standard is 15" for BB, but available from 14" to 18". The X model allows players to sit w/feet tucked back for protection.

Seat height front/rear - Floor to top of tube in the front and rear respectively, front range is 17" - 21", rear 13" - 21". Most daily use chairs have a 1" - 3" difference. Sport application depends on the sport and the ability/disability. High level injuries prefer more drop in the seat and lower injuries less. The drop adds balance, security in the seat and better positioning for high injuries. Rigidizer bars keep upholstery from sagging. A "Big Man" chair is usually 21" front and 21" rear, while a point guard prefers a 2" difference between front and rear seat heights.

Distance rear to front caster - Ranges from 20" - 26" for basketball - measured from the outside frame to center of front caster housing. The shorter the person the shorter the chair. 26" is recommended for tall players. Recommend a minimum of seat depth plus 6"-7" for forward stability depending on a player's position. A longer measurement will deliver more forward stability as there is more weight behind the front caster.

Back - Fixed is standard for basketball. Adjustable backrest height recommended for BB.

Adjustable axle position - The camber tube is one solid tube with fixed camber. The tube can be moved forward or backward for optimum wheel position. A swivel anti-tip bar will allow the wheels to move forward without sacrificing safety and allow for faster turning.

BB wings - Offensive BB wings are standard and used to prevent "hooking." Notations to omit wings should be documented in the "Special Instructions" box on the front of the order form.

Camber - Available from 12° - 20°. Camber is used to describe the amount of angle in the rear wheels (in at top/out at the bottom). Camber gives the chair more stability and quicker turning ability. The downfall is that it increases the overall width of the chair.

Customary BB features:

Adjustable back/seat upholstery - Will allow for a custom "sport" fit.

Adjustable footrest system - The front bumper/wing is welded at the legal height. A recessed height and angle adjustable footrest is 8" deep and can be raised or lowered to position the legs. The footrest has a foot strap to secure the feet.

Rear wheels - Standard size is 24" (25 - 540). For those customers that want to sit higher or "push more wheel" 26" (25 - 590) or 700C is available. An in between size is the 25" (25 - 559) which offers a happy medium. Double wall rim, high flange hubs, and high pressure tires are standard.

Front caster - For court sports, the 3" in-line wheel is preferred.

BB Options - Many options are available. The most common options for BB include cushion: soft or hard, spoke guards, fixed aluminum side guard and an extra camber bar. Frame protectors are recommended for the rear.

Color selection - See Color Selection Guide for details.
